# MASTERING QUESTIONS ON FRACTIONS

Fractions represent parts of a whole and are expressed as ratios of two numbers. Students also learn different concepts with fractions and apply them in solving problems.

Concept: One Item Constant

Example:

Denise baked thrice as many cakes as Theresa. Denise sold 50 of her cakes. Then, she had $\frac{1}{2}$ as many cakes as Theresa. How many cakes did both girls bake?

5 u → 50

1 u → 10

8 u → 80

The girls bake 80 cakes.

Theresa's muffins are constant.
